U.S. Patent and Trademark Office

Continuation of 11, does NOT place the application in condition for allowance because: As regards to Yuda et al, applicant's argument is not persuasive as to the point that Yuda et al fails to teach the plasma excitation gas supply port for supplying—at least from a lower side to ward a central portion of the region on said—high frequency wave supply side because the argument is more specific than the claims because the claims do not specifically recite the position of the plasma excitation gas supply port (18) is lower side relative to which part of the device (emphasis added). It is noted that Yuda et al's plasma excitation gas supply port (18) is between the high frequency applied electrode (2) and the plasma confining electrode (5) having openings to allow passing the plasma generated in the plasma generation site into the substrate mounting site and such confining electrode resemble as the claimed "flat-plate structure".

Therefore, Yuda et al teach the plasma excitation gas supply port is positioned at least at a lower side of the high frequency generator as the claim is not limiting that the gas supply port is in lateral position.

It is noted that examiner acknowledged in the interview conducted on July 13, 2009 that Yuda does not explicitly teach the plasma excitation gas supply port for supplying —— at least from a lower side to words a center portion on the region on the high frequency wave supply unit side. But upon closer review the Yuda reference, examiner concluded that such limitation such as the gas supply port is at least lower side (of the high frequency generator) towards a central portion of the high frequency wave supply unit side.
